

TSM 7,500 PSI FLUID ENDS

TSM Fluid End designs are based on many years of experience in manufacturing, servicing, and repairing mud pump fluid end components. All modules are forged using superior materials with characteristics that exceed the typical 4130 forged products offered by the competition. Characteristics include: through hardness, fatigue/crack resistant properties and low temperature ratings. These features combined with smooth inside surfaces/radii result in a high quality product.

- › Fluid end castings and forgings are 100% UT and MPI inspected.
- › Analyzed and designed for improved fatigue life.
- › Manufactured, assembled, serviced and repaired in our Canadian facility.

We provide leading support for our products with a comprehensive warranty, technical support, and 24/7 service.
